

Industrial use of steam from waste incineration plant

Type of work

Analysis of various options for industrial use of steam from waste incineration plant.

Concept description

The waste incineration plant located in Hurum has lost its steam consumer (Hurum paper mill). Other alternatives for industrial use of the steam produced in the boiler from the waste incineration process were analyzed.

Client

Daimyo AS, Oslo, Norway.
 Project cost: 0.1 MNOK
 Project duration: March 2009.

Nebb Engineering delivery

- Local options for steam consumptions
- Possibilities for new industries with synergy effects
- Analysis report
- Brief analysis of the different alternatives

The project was an initial analysis, where a deeper, more thorough analysis of the different alternatives would be a natural next step.
